

**Beyond the Kalman Filter**  
**Particle Filters for Tracking Applications**  
Branko Ristic, Sanjeev Arulampalam, Neil Gordon

**Navtech Part #1141**

**Contents:**

Part I - Theoretical Concepts.

Introduction - Nonlinear Filtering. The Problem and Its Conceptual Solutions. Optimal Algorithms. Multiple Switching Dynamic Models. Basics of Target Tracking. Summary.

Suboptimal Nonlinear Filters - Analytic Approximations. Numerical Methods. Gaussian Sum Filters. Unscented Kalman Filter. Summary.

A Tutorial on Particle Filters - Monte Carlo Integration. Sequential Importance Sampling. Resampling. Selection of Importance Density. Versions of Particle Filters. Summary.

Cramér-Rao Bounds for Nonlinear Filtering - Background. General Recursive Calculations. Special Cases. Multiple Switching Dynamic Models. Probability of Detection Less than 1. Summary.

Part II - Tracking Applications.

Tracking a Ballistic Object.

Bearings-Only Tracking.

Range-Only Tracking.

Bistatic Radar Tracking.

Tracking Targets Through Blind Doppler.

Terrain Aided Tracking.

Detection and Tracking of Stealthy Targets.

Group and Extended Object Tracking.
